Scottish fiscal consolidation

	2011-2	2012-3	2013-4	2014-5
Resource DEL	545.1	756.4	1156.5	1632.1
Capital DEL	866.0	913.3	1221.2	1188.0
Welfare	139.2	404.9	786.4	1004.2
Total	1550.3	2074.6	3164.1	3824.3

Cumulative expenditure shock, £million, 2006 prices

About the expenditure shocks...

- Different time pattern for the three expenditure streams
- Different sectoral pattern for each stream
- Limitations
 - Only covering demand-side exogenous impacts
 - Some public expenditure in Scotland not covered
 - Don't incorporate UK-wide tax changes

Model issues

- AMOS is not a forecasting model
- Structure such that it cannot generate 100% “crowding in”.
- Finance is passive in the model
- Myopic
- Single-region

Employment, % changes from base

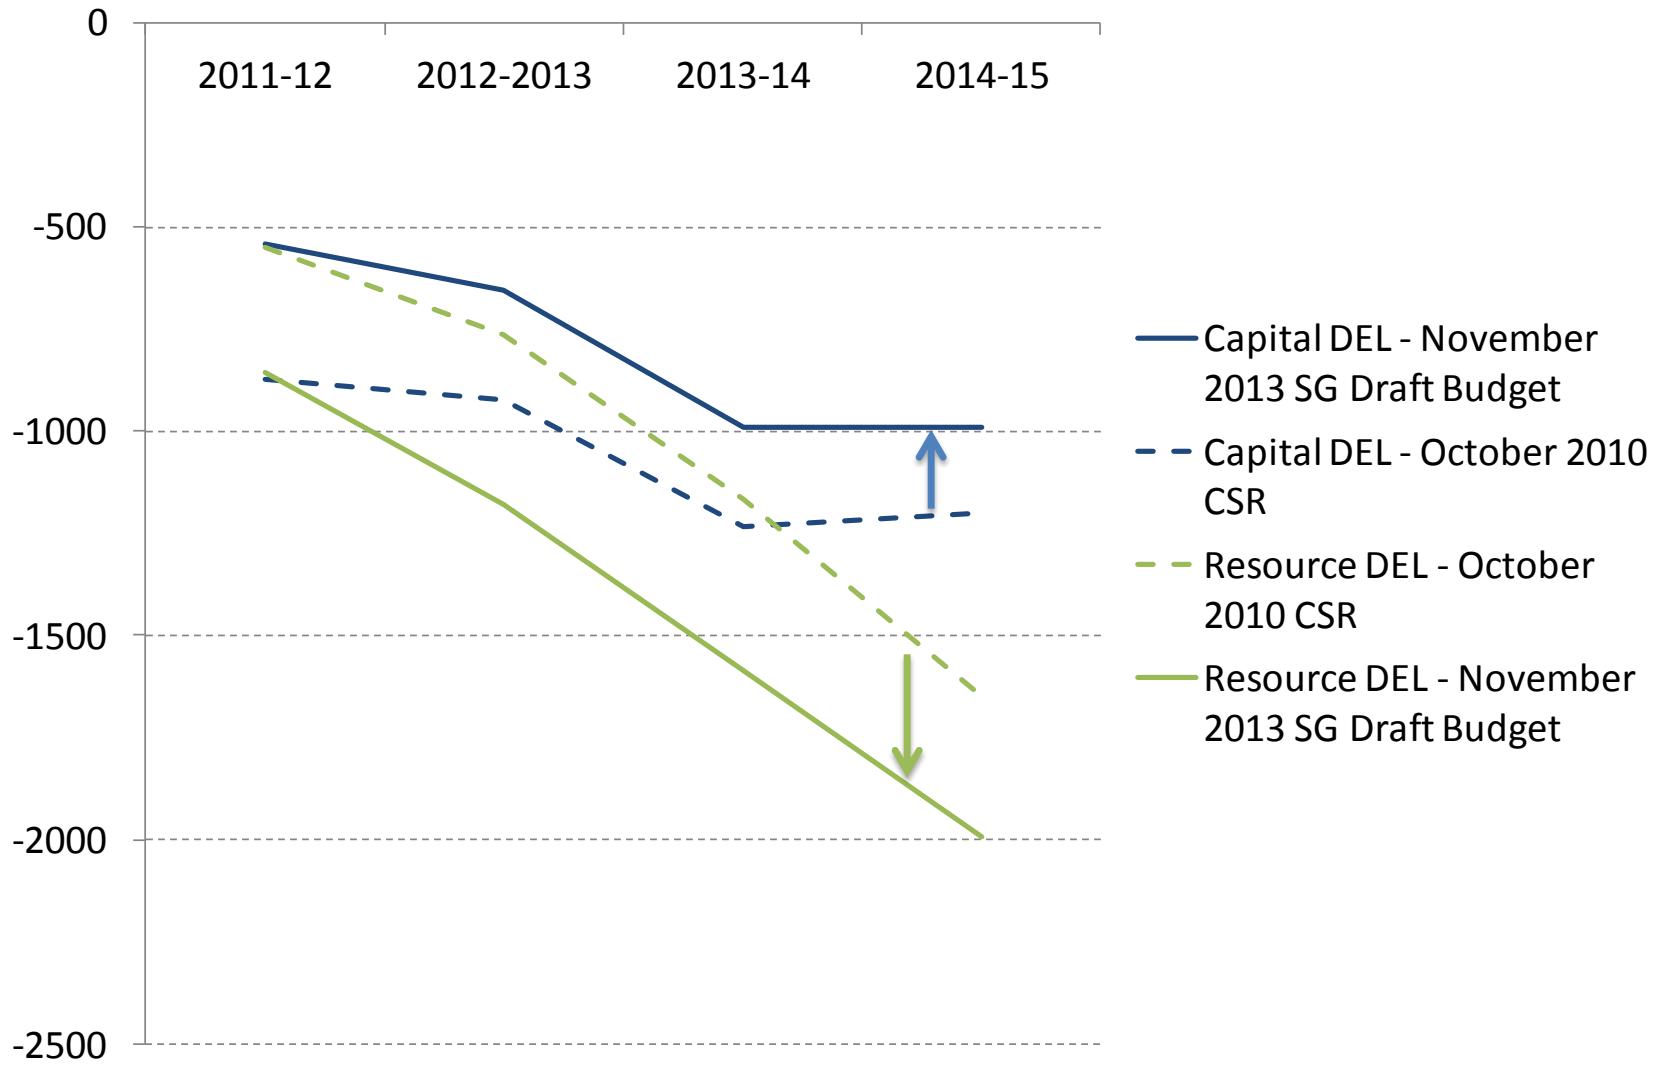

Long-run sectoral employment effects

- There is always a positive impact for Manufacturing (exports)
- Resource DEL has a very big negative effect on public sectors but positive impacts on all other sectors
- Capital DEL and welfare expenditure has very small or negative impacts on all non-manufacturing sectors.

Long-run sectoral employment changes, absolute

An update...

An update...

- SG has switched funds from Revenue to Capital DEL
- Our results suggest GDP/shock ratio greater for Capital than Resource spending
 - Capital DEL = 0.439
 - Resource DEL = 0.367
